

Assignment – 13

Problem Statement – Create a WorkMail for your organization.

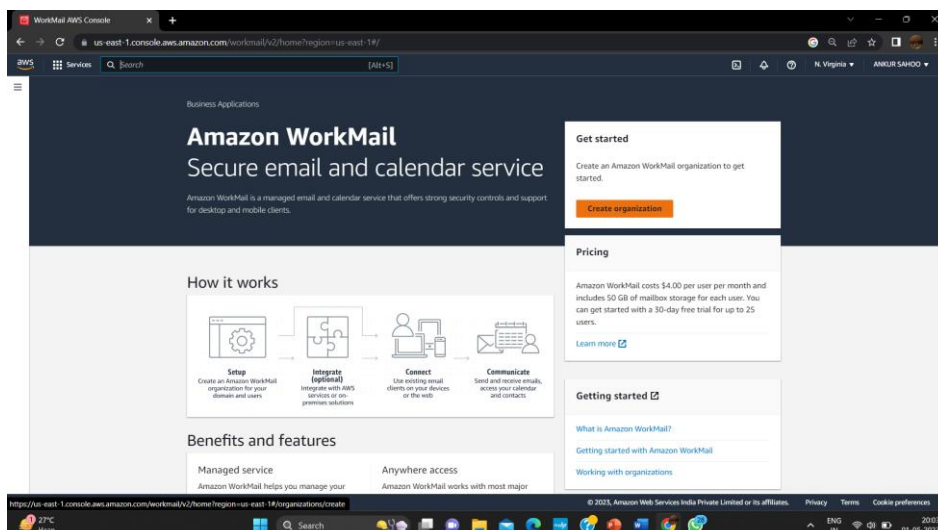

- Log in to your AWS account and go to Amazon WorkMail.

- Select the region US East (N. Virginia) as this service is not available in our region.

- Click on Create Organization.

- Select the Free test domain and give an Alias for your organization. Then click on Create organization.

Assignment – 13

Problem Statement – Create a WorkMail for your organization.

Amazon WorkMail > Organizations > Create organization

Create an Amazon WorkMail organization

Create an Amazon WorkMail organization to provide email addresses to groups of users in your company. The email addresses include the domains that you select for your organization.

Organization settings

Email domain [Info](#)
Select the domain to use for email addresses in your organization.

- ☐ Existing Route 53 domain
Select a domain name that you manage with a Route 53 hosted zone.
- ☐ New Route 53 domain
Register a new Route 53 domain name to use with Amazon WorkMail.
- ☐ External domain
Enter a domain name that you manage with an external DNS provider.
- ☒ Free test domain
Use a free testing domain provided by Amazon WorkMail. You can add a domain later.

Alias [Info](#)
Enter the alias to use for your organization.

dont-invest

Your alias can have up to 45 characters. Aliases can only include lowercase letters (a-z), numbers (0-9), and dashes (-). This determines the login URL for the web application: dont-invest.awsapps.com/na11

Advanced settings

Cancel Create organization

- Now click on your newly created organization and then go to Users and click on Create user.

Amazon WorkMail > Organizations > dont-invest > Users

Users (0) [Info](#)

Search users
