# Assignment – 03

Problem Statement – Create IAM user and thereby give full access to s3.

- After logging in to your AWS account, search IAM on the search bar and then click on IAM. Then click on Users. Then click on "add users" on the right side.

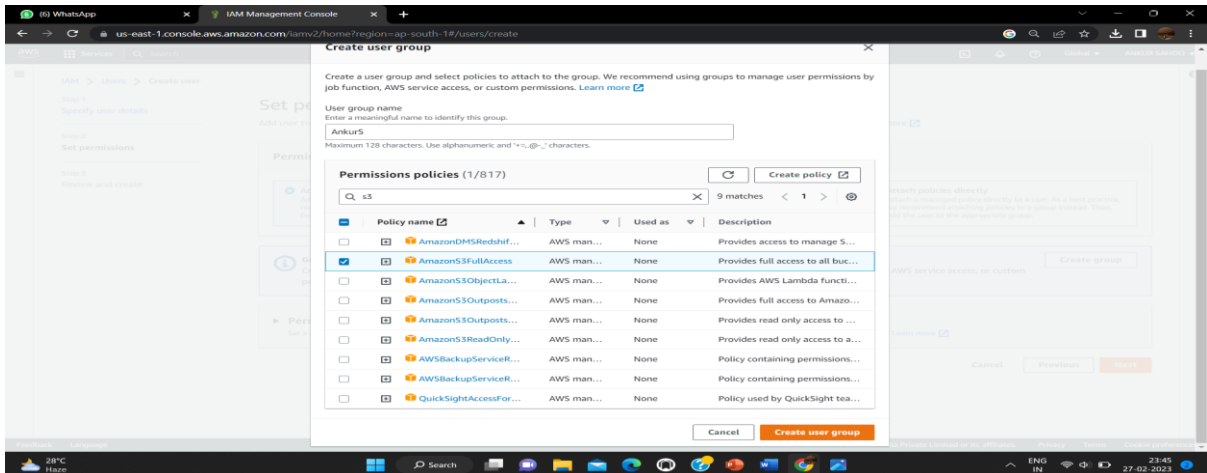

- Set the IAM user name, click the checkbox "Provide user access…" and select the "I want to create an IAM user" and set the custom password. Then click on next.

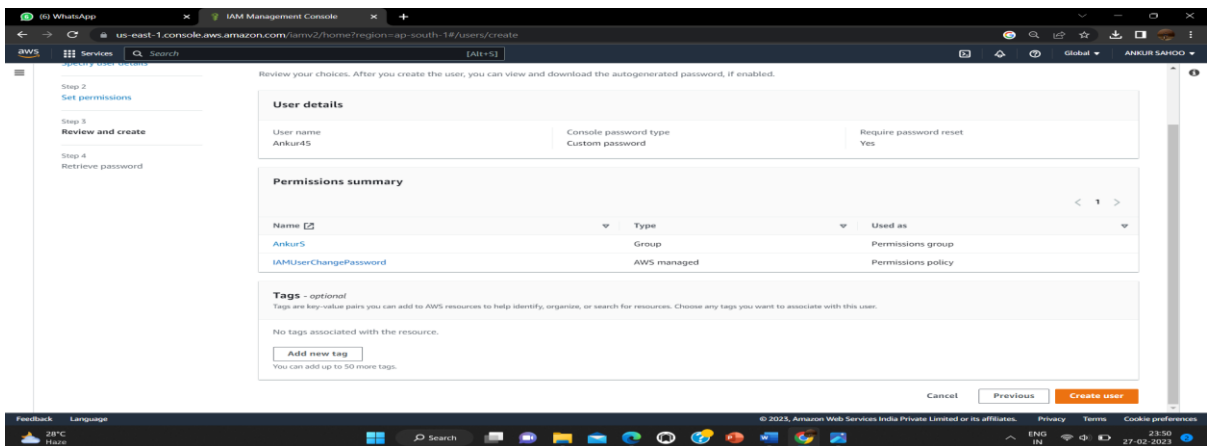

- Then select any existing group or create a group and search and set the "AmazonS3FullAccess" permission.

Assignment – 03

Problem Statement – Create IAM user and thereby give full access to s3.

- Select the group and click on next and then review the user details and then click on "Create user".

- Now copy the Console sign-in URL and paste it on a incognito tab and fill up user and password and click on sign in. Then reset the password and the IAM user console will be opened.
