# Assignment – 04

Problem Statement – Create a private bucket in AWS. Upload a file and check by presigned URL that you can access the file or not.
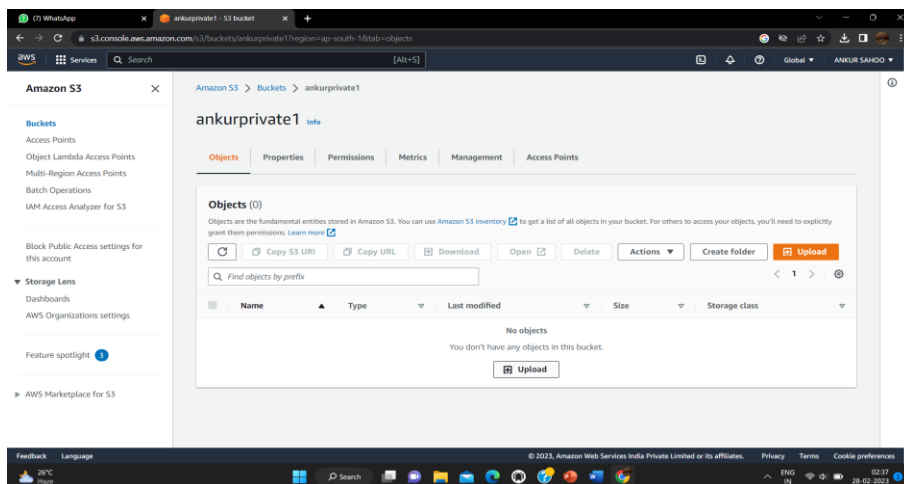

- After logging in to your AWS account, go to search bar and search S3, then click on buckets on the left panel and then click on "Create bucket".

- Choose a name for your bucket and keep the rest of the settings as it is and lastly click on create bucket.

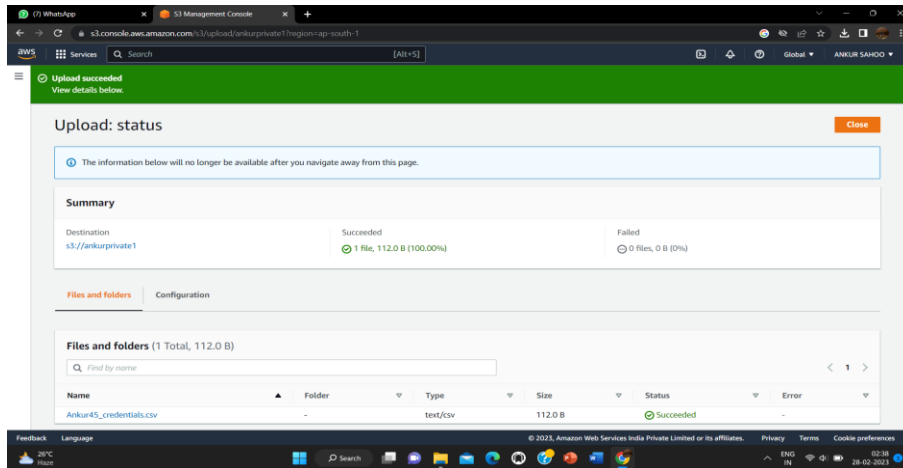

- Now to go to your newly created bucket and click on upload.

Problem Statement – Create a private bucket in AWS. Upload a file and check by presigned URL that you can access the file or not.
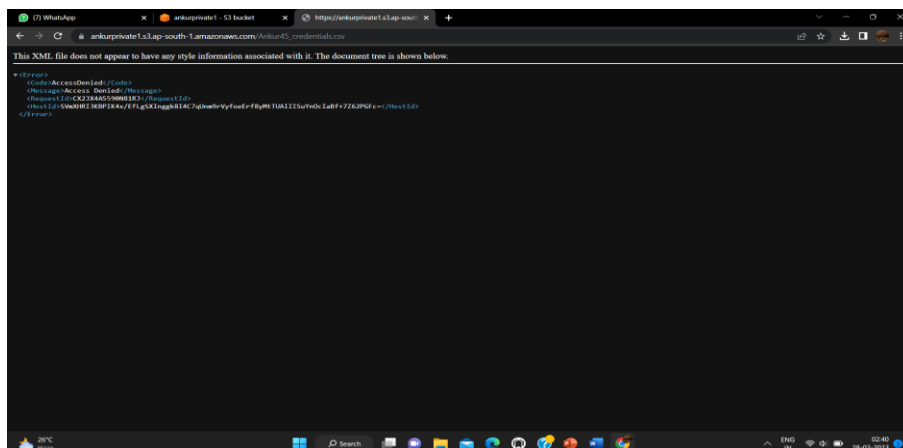

- Now click on add file/folder and choose the file you want to upload. Then click on upload to complete the upload procedure.

- Now click on the newly uploaded file and copy the object URL.

- Now go to a new tab and paste the object URL and you will receive an error code, because we have the created a private bucket and one can not access it without a presigned URL.
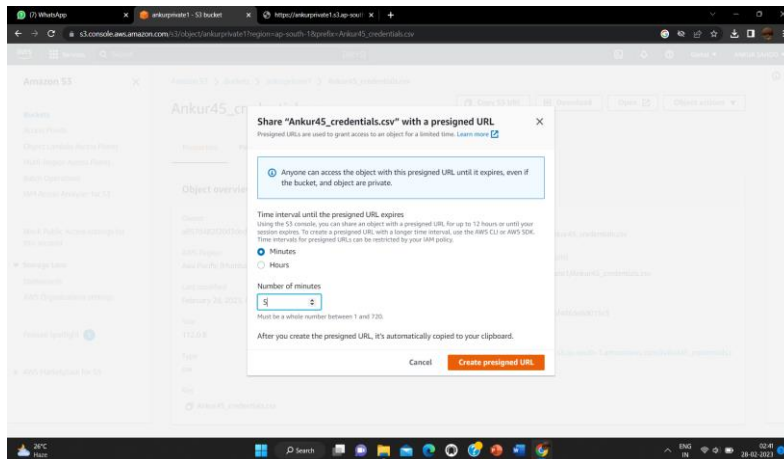

Assignment – 04

Problem Statement – Create a private bucket in AWS. Upload a file and check by presigned URL that you can access the file or not.

- Now comeback to the AWS file properties page and click on "object actions" and then click on "share with a presigned URL"
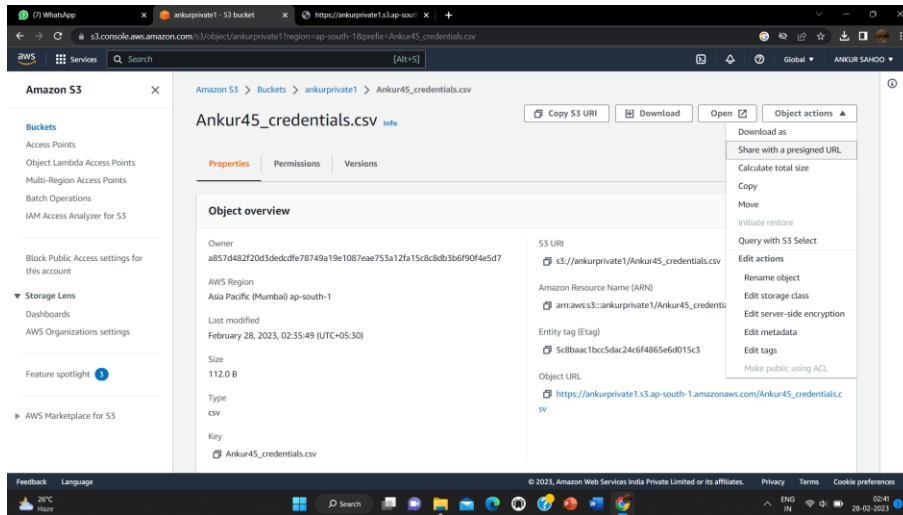

- Set the time interval to 5 minutes and click on "create presigned URL"

- Copy the presigned URL and then paste it to a new tab and the file will be automatically downloaded.
