# Assignment – 02

Problem Statement – Create MFA for authentication for the root user.

- After logging in to your AWS account, click on the top right corner on your profile and then click on security credentials.

- Click on "Assign MFA".

- Then set the device name of your choice, keep rest of the settings same and click on next.

- Then scan the QR code from your authenticator app and set two initial MFA code and lastly click on add MFA.
